## Take control with Boulting

### Quality as standard

We build your MCC to order and with over 50 years in the business there is no configuration that we haven't been able to manufacture here in the UK. And that doesn't mean lengthy build times either, with an average of 8 weeks from conception to completion you can be sure that we meet your exacting deadlines.

Our systems and process ensure that you get the quality you'd expect from an ISO9001 accredited supplier and you can even come and visit us to see your project being built. Of course we also comply with BS EN 61439 as standard.

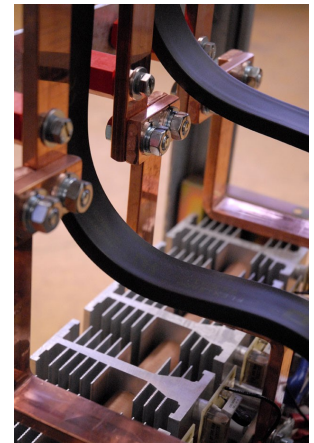

### Control in any space

Short on space? A corner to accommodate? We love the challenge and our experienced designers can ensure that your motor control centre meets your specification whatever your space.

### Control whatever your requirements

Whatever fault ratings or busbar positions are required to fit in your space, we have the design and manufacturing capability to accommodate.

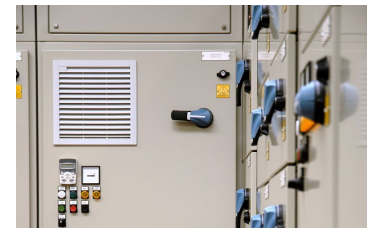

With over 2000 square metres of manufacturing facility and specialist equipment you can be confident we can build to your specific requirements.

**Truly back to back:** with a shared riser and main distribution bars, our back to back designs are truly space saving and with no fold. Cost effective and a smaller footprint of 1000mm.

**U shape:** custom made to fit, delivered in sections for ease of installation and implemented by experienced Boulting personnel.

**L shape: or any other shape...** We have manufactured units that fit around corners or even bridge units and many other configurations.

Boulting Technology, a strategic business of Boulting Ltd, are the UK's leading supplier of Systems Integration, LV Assemblies, Telemetry and Industrial Networks. Partnering with leading vendors including:

Boulting Ltd, Boulting House, Firecrest Court, Centre Park, Warrington WA1 1RG

## Take control with Boulting

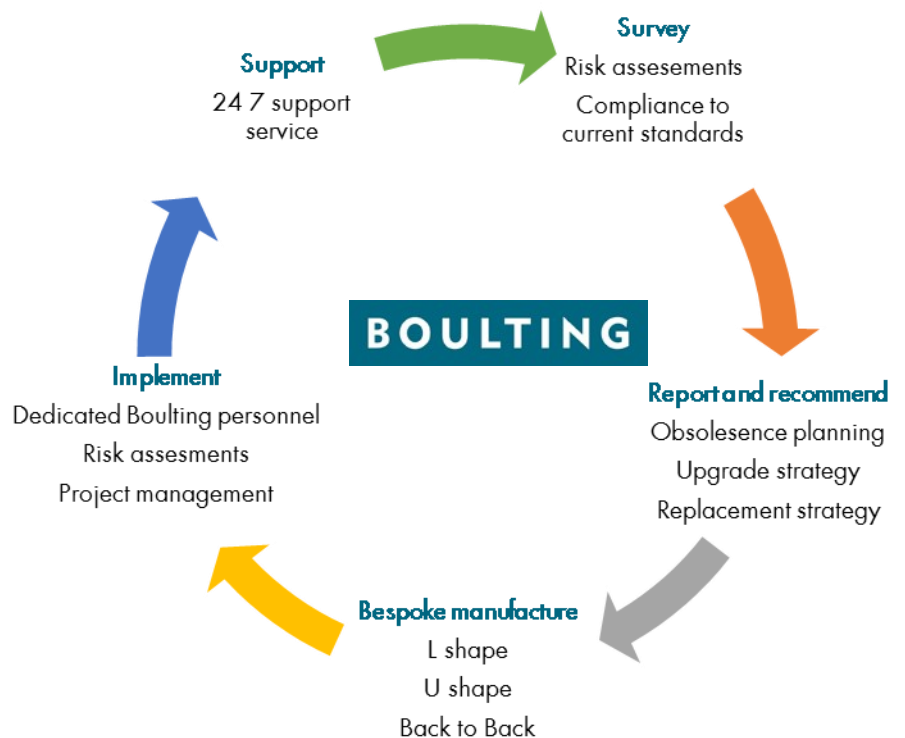

### Control of delivery

We use our own specialist in house team to ensure that delivery is secure and safe. With a specialist wagon and lifting gear we deliver your Motor control centre safely to its final place and install at a time suitable to you and your processes. Boulting has a large resource of highly skilled electrical engineers capable to deliver your solution whenever and wherever it's required.

### Control for the future

We provide fast response Service & Support packages as well as scheduled maintenance and site adoption programmes.
