Cloud Services

Increased productivity and efficiency through the cloud

Cloud computing is helping organisations in all sectors adapt to today's rapidly changing technology landscape.

With the increased integration of automation and artificial intelligence into industrial systems, cloud computing provides a way for organisations to readily stay ahead of the curve and quickly react to change.

Contact us to discuss the benefits of cloud transformation or arrange a call to discuss your requirements.

Systems operating in the cloud are often cheaper, easier to manage and provide higher availability than on-premise systems.

For example, a cloud-based SCADA system can be setup much faster and operating in a matter of hours where as an on-premise SCADA system can take several weeks to several months to be fully operational and providing value.

Highly available and scalable applications that collect and store operational data can quickly be developed and deployed in the cloud. Automating and applying advanced analytics to this data can then lead to improvements in productivity and efficiency across the entire organisation

▪ Enabling end to end digitalisation ▪

Boulting Technology, a strategic business of Boulting Ltd, are the UK's leading supplier of Systems Integration, LV Assemblies, Telemetry and Industrial Networks. NETbuilder is a leading provider of software, consulting and managed services .
