## Security Consultancy

### Secure and protected networks for maximum threat aversion

Cyber security threats to industrial networks can originate from a number of sources, be they internal or external. If these threats are successfully realised, the impact can include system downtime, financial loss and reputational damage.

In order to protect against these threats, a firewall can be deployed to effectively secure and protect the industrial network from other networks. This can be taken even further by securely segregating individual production lines whilst still allowing connectivity to the wider network.

Contact us for more details or to arrange a call to discuss your requirements.

A firewall alone isn't enough to comprehensively safeguard the ever-changing threat landscape. Ideally a Unified Threat Management (UTM) appliance should be deployed to provide additional protection by using services such as:

- Intrusion Prevention Services (IPS)
- Gateway Anti-Virus (GAV)
- Application Control
- Web Filtering
- Email Filtering

Boulting/NETbuilder offer a comprehensive end-to-end firewall/UTM design and configuration consultancy service that will:

- Gather your requirements
- Review the current setup
- Provide a solution design
- Implement said solution design to securely protect your industrial and OT IT assets

## ▪ Enabling end to end digitalisation ▪

Boulting Technology, a strategic business of Boulting Ltd, are the UK's leading supplier of Systems Integration, LV Assemblies, Telemetry and Industrial Networks. NETbuilder is a leading provider of software, consulting and managed services .
