Intelligent data to improve operational efficiency

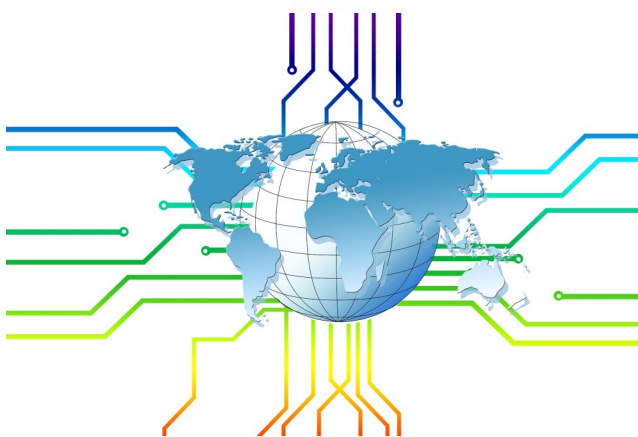

Industrial organisations often have limited visibility into Operational Technology data that is in use across the organisation. This limited visibility can lead to productivity loss, downtime and a reactive rather than proactive approach.

Boulting/NETbuilder utilise Splunk software to deliver monitoring solutions. With Splunk software, organisations can apply intelligence to their data to determine everything from operational health to the security posture of the organisation's infrastructure.

Contact us for more details or to arrange a call to discuss your requirements .

By implementing a solution that gathers and analyses the data generated by devices, control systems, sensors, SCADA, networks, applications and end users connected to the network, the organisation can:

- Gain real-time insights and a unified view across critical industrial systems and assets
- Improve operational efficiency through reduced downtime and increased availability
- Quickly diagnose costly operational issues by correlating data from across operational technology
- Move from being reactive to proactive in operations by detecting patterns, trends and anomalies

▪ Enabling end to end digitalisation ▪

Boulting Technology, a strategic business of Boulting Ltd, are the UK's leading supplier of Systems Integration, LV Assemblies, Telemetry and Industrial Networks. NETbuilder is a leading provider of software, consulting and managed services .
