Security Consultancy

Early detection, rapid response and collaboration to mitigate advanced threats imposes significant demands on today's enterprise security teams. Reporting and monitoring logs and security events is no longer enough. Security practitioners need broader insights from all data sources generated at scale across the entire organisation from IT, the business and the cloud.

In order to stay ahead of external attacks and malicious insiders, companies need an advanced security solution that can be used for rapid response detection, incident investigation and co-ordination of breach scenarios. In addition, companies need the ability to detect and respond to known, unknown and advanced threats.

Contact us for more details or to arrange a call to discuss your requirements.

Boulting/NETbuilder offer a Splunk security solution that meets these requirements but also delivers security analytics capabilities, providing the valuable context and visual insights that help security teams to make faster and smarter security decisions.

The solution includes:

- Security monitoring for peace of mind
- Early stage fraud detection
- Single platform to operationalise compliance
- Advanced threat detection through comprehensive analysis
- Insider threats within network
- Incident response to limit downtime
- SOC automation
- Incident Investigation and forensics

▪ Enabling end to end digitalisation ▪
